Landing Procedures

- Alert crew and bystanders of approaching aircraft.
- Ensure landing site is clear of debris and is suitable for landing.
- When drone is approximately 10m away, rotate drone to face away (to allow natural flight control movements).
- Ensure all crew and involved people are clear of landing site.
- Ensure all bystanders are 30m away from landing site.
- Land drone.
- Turn off motors and camera.
- Retrieve drone and inspect for damage.
- Disassemble as required, apply gimbal guard and lens cover, stow gear.
- Record flight in flight log.
